Atty Dkt.: 2002-IP-009930U1 (1391-41400)

Patent

AMENDMENTS TO THE CLAIMS

Listing Of Claims:

- 1. (Currently Amended) A method of placing a tubular sleeve in a well bore, the method comprising:
 - a) providing a carrier configured to hold a tubular sleeve comprising a plurality of fibers in a braided arrangement;
 - b) positioning the tubular sleeve within an interior of the carrier; and
 - c) moving the carrier into the well bore; and
 - d) releasing the sleeve from the carrier and removing the carrier from the well bore.
- 2. (Original) The method of claim 1 wherein an upper end of the carrier is attached to a lower end of a conveyance string.
- 3. (Original) The method of claim 2 wherein the conveyance string is tubing.
- 4. (Original) The method of claim 2 wherein the conveyance string is wireline.
- 5. (Original) The method of claim 1, further comprising positioning the carrier proximate a bottom of the well bore by lowering the carrier in the well bore.
- 6. (Original) The method of claim 5 wherein an anchor is attached to a base of the sleeve.
- 7. (Original) The method of claim 6, further comprising securing the anchor to the ground at the bottom of the well bore.
- 8. (Original) The method of claim 1, further comprising positioning the carrier between a lower end of the well bore and an upper end of the well bore.

Atty Dkt.: 2002-IP-009930U1 (1391-41400)

Patent

- 9. (Original) The method of claim 8 wherein extending arms are attached to a base of the sleeve.
- 10. (Original) The method of claim 9, further comprising securing the extending arms to a sidewall of the well bore.
- 11. (Original) The method of claim I wherein the sleeve is in a folded position within the interior of the carrier.
- 12. (Original) The method of claim 11, further comprising moving the carrier toward a top of the well bore such that the sleeve at least partially unfolds, thereby positioning the sleeve at a predetermined location.
- 13. (Original) The method of claim 1, further comprising expanding the sleeve.
- 14. (Original) The method of claim 13 wherein said expanding comprises pressurizing a fluid against an interior wall of the sleeve.
- 15. (Original) The method of claim 14 wherein the fluid comprises at least one of a curable resin, a curing agent, or a drilling fluid.
- 16. (Original) The method of claim 13 wherein said expanding comprises positioning an inflatable member within the sleeve and inflating the member.
- 17. (Original) The method of claim 13 wherein said expanding comprises moving a mandrel through the sleeve.
- 18. (Original) The method of claim 1, further comprising treating the sleeve with a curable resin before step (b).
- 19. (Original) The method of claim 1, further comprising treating the sleeve with a curable resin after step (b).

15:37

SEP-27-2005

- 20. (Original) The method of claim 18 wherein the curable resin comprise at least one of an acid curable resin, an epoxide resin, a partially polymerized resin capable of being cured by heating, and monomers capable of being cured by azo or peroxide initiators and heating.
- 21. (Original) The method of claim 18, further comprising partially curing the curable resin before step (b).
- 22. (Previously Presented) The method of claim 21, further comprising curing the curable resin after step (b).
- 23. (Original) The method of claim 22 wherein said substantially curing comprises injecting a curing agent into the sleeve.
- 24. (Original) The method of claim 22 wherein said substantially curing comprises heating the sleeve.
- 25. (Canceled)
- 26. (Original) The method of claim 24, further comprising reloading the carrier with another sleeve.
- 27. (Original) The method of claim 25, further comprising passing a drill bit through the sleeve and drilling the well bore a distance below the sleeve.
- 28. (Original) The method of claim 21 wherein said curing the resin causes the sleeve to become substantially impermeable.
- 29. (Currently Amended) A system for placing a tubular sleeve in a well bore, the system comprising:
 - a tubular sleeve comprising a plurality of fibers in a braided arrangement; and a <u>removable</u> carrier configured to hold the tubular sleeve within its interior.

Atty DkL: 2002-IP-009930U1 (1391-41400)

Patent

- 30. (Original) The system of claim 29 wherein the fibers comprise at least one of glass, aramid, nylon, carbon, polyester, and polypropylene.
- 31. (Original) The system of claim 29 wherein the carrier comprises steel.
- 32. (Canceled)
- 33. (Original) The system of claim 32 wherein the sleeve is detachably attached to the carrier.
- 34. (Original) The system of claim 29, further comprising a conveyance string attached to the carrier for lowering the carrier into the well bore.
- 35. (Original) The system of claim 29, further comprising at least one anchor or extending arm attached to the sleeve for securing the sleeve to the well bore.
- 36. (Original) The system of claim 35 wherein the at least one anchor or extending arm comprises at least one of aluminum, steel, a composite material, and a plastic.
- 37. (Original) The system of claim 32 wherein the sleeve is in an undeployed state within the interior of the carrier.
- 38. (Original) The system of claim 37 wherein the sleeve is folded.
- 39. (Original) The system of claim 37 wherein the sleeve is substantially flexible and is configured for expansion upon deployment.
- 40. (Original) The system of claim 29, further comprising an inflatable member disposed inside the sleeve for expanding the sleeve.
- 41. (Original) The system of claim 29, further comprising a curable resin disposed on the sleeve.

Atty Dkt.: 2002-IP-009930U1 (1391-41400)

Patent

- 42. (Original) The system of claim 41 wherein the curable resin comprises at least one of an acid curable resin, an epoxide resin, a partially polymerized resin capable of being cured by heating, and monomers capable of being cured by azo or peroxide initiators and heating.
- 43. (Original) The system of claim 29 wherein the carrier is sized to fit within a well bore.
- 44. (Original) The system of claim 29 wherein the carrier is substantially cylindrical in shape.
- 45. (Original) The system of claim 33 wherein the carrier comprises a release mechanism for releasing the sleeve.
- 46. (Currently Amended) A method of loading a flexible sleeve in a carrier, comprising:

 positioning the sleeve in an undeployed state within an interior of the carrier;

conveying the carrier downhole;

deploying the sleeve; and

removing the carrier from the wellbore.

47-48 (Canceled)
